Dear colleagues

Since January 2010 there is a new telemetric ICP monitoring system available. This system is the first which allows long-term ICP monitoring even at home. The direct measurement of intracranial pressure during normal daily activities over days or even weeks gives us absolutely unprecedented insights into illness and disease pathologies. Our intention for this workshop is to share and discuss our experiences with this new diagnostic tool. We expect telemetric ICP monitoring to be an integral part of neurosurgery in the future.

Our staff from Homburg welcomes you here for a workshop with intense discussion, hands-on experience and live surgery cases. We are looking forward to have you here.

Sincerely yours,

Prof. Dr. Joachim Oertel
