Dear colleagues

Contemporary treatment of neurovascular diseases requires a high degree of interdisciplinary competence both from neurosurgery and neuroradiology.

Our philosophy:

Complementary treatment - integrating expertise from both fields in an interdisciplinary treatment strategy like preoperative embolization and surgical resection.

Competitive treatment in disease-specific clinical pictures, such as cerebral aneurysms, improves the technique and increases the quality of treatment for the patient, since both disciplines are highly motivated.

Joachim Oertel

Wolfgang Reith

Competent treatment of specific pathologies like EC-IC bypass or endovascular thrombectomy and mutual dialogue - which we would like you to experience first-hand.

Overall the workshop stresses the close interdisciplinary cooperation between the Department of Neuroradiology and the Department of Neurosurgery at our university medical center.

Our staff and selected experts would like to welcome you for intense discussions, live surgery cases and hands-on experience. We are looking forward to see you at the workshop!

Sincerely yours,

Joachim Oertel, M.D., PhD
